

Grape Governance Token - GGT

What is GGT?

Grape governance token (\$GGT) - is an asset in the wide Grape's ecosystem that will allow early \$GRP holders to take part in the overall development direction of the platform.

To form a strong economy in the Grape ecosystem, and have a clear application, the team has decided to make governance a separate token.

GRP - is the **main coin of the Grape** ecosystem that allows accessing all functions and services.

GGT - is a **governance token** that will be launched on the Grape's smart contract engine that will be used to create proposals and vote on the future of Grape.

GGT initial distribution will be limited in time and directly connected to the sale period of GRP. GGT will be listed on exchanges after the first GRP sale round.

How to get GGT?

GGT will be distributed as a **bonus to all GRP early holders**. During the sale period of GRP, each holder **automatically will receive up to 60% bonus in GGT** in addition to GRP purchased. A bonus percentage of GGT distributed with GRP will be lower with each round, so early holders will have the biggest influence on the project's future.

For example, if a user purchases 100 GRP, they will receive up to 60 GGT as a bonus.

Grape DAO

From the GRP total supply, 10% or 1 million coins will be distributed to a separate fund which will be fully controlled by Grape DAO through GGT. At the initial rate, early holders will influence where **\$23,000,000** should be spent. DAO will be able to vote on any proposals that decide how the ecosystem should be developed and which projects that launch on Grape should be funded. Those votings will be exclusive for GGT holders.
